Of Union Township.

For County Clerk,  
JOHN KNOWLES,  
Of Union Township.

For County Clerk,  
JOHN KNOWLES,  
Of Union Township.

Nodaway township for many years; is a fine penman and a careful business man. As he understands German, this will be of great service to him in recording instruments of writing the signatures of which are in that language.

W. H. Frame will be the next Sheriff. He is a native of Ohio, and has been in business at Craig for about ten years. He is at present connected with the establishment of Thomas & Orr. He is thoroughly qualified and is very popular with the people. Democrats as well as Republicans. He will add great strength to the ticket and will be elected by a tremendous majority.

For County Clerk, J. H. G. Curtis was nominated by acclamation. He has filled the office to the satisfaction of every body for four years and will undoubtedly be continued in the position for another term. His close application to business and his gentlemanly manners have made him a favorite with all parties, and it is not at all probable that any candidate will enter the field against him.

For County Judge at Large, George McIntyre of Forbes township was nominated. He has heretofore filled the office of county judge for a period of six years and is therefore entirely conversant with the duties of the position. A resident of Holt county for thirty years, he is universally known and respected.

George Meyer is the nominee for County Judge from the First District. He is a well known German citizen, of fine and progressive views, and careful business habits. On the bench he will administer the affairs of the county without sectional prejudice and according to what he conceives to be the greatest good to the greatest number.

For Judge from the Second District, George W. Gaskill was selected. He has lived in Holt county for the last twelve years and is a man of high integrity and excellent qualifications. He is very popular in the north end of the county and will go in by a heavy vote.

Dr. R. King was nominated for Coroner. He has had the office for several years, to the satisfaction of the people, and will have no trouble about a re-election.

The above is the ticket. Go to work and elect it.

## FINANCE AND POLITICS.

What is a Government bond?—Answer: A printed obligation of the Government to pay a certain number of dollars, with interest.

What is a greenback?—A Government note promising to pay the bearer one or more dollars without interest.

What is a dollar?—A United States Government coin, worth 100 cents.

It is a man takes up his own note and gives a new note to his own bank for the old one, is the debt thereby paid?—A. It is not; the obligation is renewed, but not paid.

What is the Government taking up one form of its obligation and gives another for it, is the debt thereby paid?—A. It is not; the obligation to pay is renewed in another form.

Can the Government pay its bonds in greenbacks?—A. It cannot, any more than a man can pay his own note by giving a new note to the old one.

What is a greenback?—A note, drawing interest at five per cent per annum, and is given upon for payment, should offer to pay his note to A. by giving him a new note, drawing no interest, what would all honest men think of it and his proposition?—A. They would think that he was either a fool or a knave, and his proposition the essence of a weak-minded or dishonest man.

A greenback being a Government note promising to pay dollars, what gives it value?—A. The Federal Government. The Government will fulfill its promise, and the belief that the Government will be able to pay in coin for all the greenbacks that will be presented for payment after the 1st day of January, 1879.

What will make greenbacks always worth as much as gold?—A. Making them redeemable in coin on demand. Cannot it be done in any other manner?—A. It cannot for any great length of time.

What is money?—A. Coin. What is the Government's power to make money of paper by law and keep it equal with gold?—A. It has no power to make money of paper or to keep paper equal in value with gold unless it is redeemable for coin.

Is not a greenback money?—A. It is not money; it is a promise to pay money.

## A SPECIMEN FALSEHOOD.

The Press intentionally misleads its readers by placing conspicuously in its editorial columns the following extract from the *East Spirit*:

"Many people are not aware that the bonded indebtedness of the country has been increased one hundred millions of dollars under the insane redemption policy of the Republican party, since the advent of the present administration, but such is the fact. This increase of our bonded indebtedness adds four millions interest annually to the interest which the people were already paying."

This statement is untrue and the Press knows it to be so. The proceeds of all the bonds which have been sold during the present administration have been used for the purpose of taking up other bonds bearing a higher rate of interest, thus making an immense saving to the government. The bonded indebtedness of the government has not been increased one dollar. A large portion of our bonds bear six per cent interest. Secretary Sherman has been selling bonds bearing only four per cent interest, and with the money received for them, paying off the six per cent bonds. And that's all there is of it.

How do you like crow? Yum, yum, yum! Very fine!

The yellow fever is still raging in the south with unabated fury.

This prospect is that the fight in 1880 will be between gold and silver on one side and "wampum" on the other.

The old dairyman who asked the Greenbacker if he could get any more cheese from his milk by watering it is still waiting for an answer.

After Slippery-Elm's menagerie goes through its performances at Mound City next Saturday, the convalescent in Holt County will be fairly opened.

Col. Frank M. Tracy has purchased the interests of his partners, Messrs. Wilder and Bittinger, in the St. Joseph Herald, and is now sole proprietor.

Both the Democrats and Republicans held State conventions in New York last week, and both declared unequivocally in favor of honest money.

In this campaign there is a real issue. It is honesty against dishonesty. Let it be honestly discussed and it will then be seen whether the people of this Republic are fit to govern themselves.

DEMOCRATIC NOMINATIONS for the legislature have been made in several counties. Republican nominations in twenty-two, and Greenback nominations in thirty-four. Of the seventy-eight Democratic nominees, twenty-seven are said to be in favor of Freeport for United States senator.

The Slippery-Elm party will hold a delegate convention at Mound City on Saturday, for the purpose of nominating a full county ticket. We predict, however, that when the members come together they will weaken, and, if they nominate at all, will take men outside of their party, who will promptly decline the doubtful honor.

One of the most amusing episodes in the convention last Saturday was the witty speech of James L. Allen at the time of the nomination for Probate Judge. It brought down the house and secured him the nomination by a handsome majority. The Judge will make a fine stump and will be heard from during the canvass.

JOSEPH HOGGESS, though defeated for the office of Treasurer, may well feel proud of the vote he received. Though only twenty-four years of age and pitted against some of the strongest men in the county, he came within two votes of being nominated. He will undoubtedly run in the next time he offers.

The Democratic county central committee which met at Mound City last Monday adjourned to meet at Forest City next Monday, at which time some definite conclusion will be arrived at as to the course to be pursued by the Democracy in the present campaign. We learn the committee was very much divided in opinion; but the majority seem to be in favor of placing an independent ticket in the field.

From the list of appointments of Senator Cookrell, published in the St. Louis *Republican* of last Friday, we find he will not speak in Oregon during this campaign, although that was the previous understanding. He speaks in Maryland and Savannah, but gives Oregon the go-by. We regret this, as he is a good speaker and is sound on the money question.

The Democratic State Convention of Massachusetts last week adopted, as one plank of its platform, the following: "Congress has no power to make anything, unless it be gold and silver, legal tender."

That is about the hardest money platform we have yet seen. But, strictly speaking, is it not true?

The foreign news indicates that England is expecting an Afghanistan war and is preparing for it. The English nation is aroused by the indignities and apparently stupid affronts of the Russia and demand his punishment. Russia seems to be a party to the trouble, and indignation is also expressed against her for alleged attempts to advance her boundaries in that direction, and loosen the hold which England, for many years, has had upon the country.

The Republicans of Atchison County have nominated the following ticket: Representative—J. P. Lewis. Judge at Large—Nicholas Dittus. Circuit Clerk—J. W. Peck. County Clerk—M. L. Weck. Collector—F. A. Schlerk. Sheriff—D. A. McCall. Treasurer—J. E. Sprinkle. Assessor—Rudolf Grebe. Prosecuting Attorney—Malcolm McKillop.

Coroner—Dr. Richard Bokham. Judge South District—J. J. Denny. Judge of North District—S. H. Hackett.

The Maryville *Republican*, which is sound on the money question, is opposed to putting a Republican candidate for Congress in the field in this district, and says:

If the Democratic party did not appear to be lost to all honor and patriotism, we would not advocate that the Republicans put no ticket in the field. As it now is it may be the part of patriotic citizens to support the nominee of the Greenback party.

To which we remark: that depends. The money question is the most important one now before the country, and, if there is any danger of these fiat-money fanatics getting control of the government, the Republicans should be willing to unite with a most anybody to defeat them.

## EDISON'S LATENT.

It is very difficult to keep pace with Edison and his inventions. Just when you think you have heard of the last, out comes another. A New York paper before us is literally full of him. We read of his telegraph, an apparatus for transmitting power over a conductor by electricity, and of his electric burner, which solves the problem as to the subdivision of light, and proves that the electric light is to be the light of the future. But he has even a later invention, as unique and suggestive as his predecessors. It is a new kind of wall paper, that absorbs light all day and gives it all night. At present the work is not quite perfected, but already the paper will make a room, perfectly light for about four hours after dark. It is not going to be difficult to make it operate from sunset to sunrise, he says, so we can already count on things as done and proceed to file our orders for new material. His operation is perfectly natural; the paper, we are given to understand, it gets and goes on so long as the sun shall shine. The effect upon the sun shall be imagined. Gas will, of course, cease to be of any use; oil will serve only in its doubtful purpose of lubrication; the whole, however, by men, will resume the population of the ocean, which, before long, will swarm with the reconstructed monsters of the last ages; crime, which flourishes in darkness, will disappear; reading will be extended over the entire twenty-four hours; everlasting sunshine will encircle us all the while; and the becoming colored spectacles will grow to be an article of universal use. When it is desired to darken a room at night, people will throw upon the blinds and the paper hangings, and let the darkness in, and the natural philosophies will be made to read: What is light? Wall paper. What is darkness? A white wall or the absence of the wall paper. Before we finish with Edison he will have to give up a new dictionary, to tell what he has done.—[R.]

There is no denying the fact that the new process flour contains relatively a larger per cent of gluten than the wheat from which it is made, so that it is really stronger than an equal portion of unbolthead flour. Mollerschott, a noted German scientist, devoted considerable time and study to this subject, and his conclusions he drew were that the use of unbolthead flour was a mistake. He says that although bran is richer in nutritive matter than unbolthead flour, nevertheless a man cannot fully digest the thick cells of the hulls unless he possesses unusually strong digestive powers and leads an active life. He states, moreover, that the contents of the digestive organs become greatly irritated by the bran, and thus undesirable results attend an abundant supply of substances which, though highly nutritious, are digested with difficulty or not at all.

In view of this fact, it might be well for the opponents of fine flour to cease prating about the decayed teeth, weak nerves, and soft bones of those who persist in eating white bread, and turn inward glance upon the condition of the membranes of their own stomachs. In the meanwhile the world will probably go on in its perversity and keep on eating fine flour; while the miller will continue to rack his brain to make the flour whiter and finer. We do not claim that the miller is a philanthropist, but we consider it apparent that in his efforts to perfect his art he has conferred signal unexpected blessings upon the race. D. Kunkle & Son, are philanthropists; they manufacture the new process flour and every family in Holt county should use it.

Persons whose blood is thin, digestion weak and liver sluggish, are extra-labile to the attacks of malarial disease. The most trifling exposure may under such conditions, infect a system which, if healthy, would resist the malarial taint. The only way to secure immunity from malarial in localities where it is prevalent, is to tone and regulate the system by habitual weakened digestion, enriching the blood, and giving a purifying and invigorating influence. These results are accomplished by nothing so effectively as Hostetter's Stomach Bitters, which long experience has proved to be the reliable safeguard against fever and ague and kindred disorders, as well as the best remedy for them. The Bitters are, moreover, an excellent purgative of the organs of urination, and an active depurant, eliminating from the blood those acrid impurities which originate rheumatic ailments.—Oct.

The most trifling exposure may under such conditions, infect a system which, if healthy, would resist the malarial taint. The only way to secure immunity from malarial in localities where it is prevalent, is to tone and regulate the system by habitual weakened digestion, enriching the blood, and giving a purifying and invigorating influence. These results are accomplished by nothing so effectively as Hostetter's Stomach Bitters, which long experience has proved to be the reliable safeguard against fever and ague and kindred disorders, as well as the best remedy for them. The Bitters are, moreover, an excellent purgative of the organs of urination, and an active depurant, eliminating from the blood those acrid impurities which originate rheumatic ailments.—Oct.

Persons whose blood is thin, digestion weak and liver sluggish, are extra-labile to the attacks of malarial disease. The most trifling exposure may under such conditions, infect a system which, if healthy, would resist the malarial taint. The only way to secure immunity from malarial in localities where it is prevalent, is to tone and regulate the system by habitual weakened digestion, enriching the blood, and giving a purifying and invigorating influence. These results are accomplished by nothing so effectively as Hostetter's Stomach Bitters, which long experience has proved to be the reliable safeguard against fever and ague and kindred disorders, as well as the best remedy for them. The Bitters are, moreover, an excellent purgative of the organs of urination, and an active depurant, eliminating from the blood those acrid impurities which originate rheumatic ailments.—Oct.

## New Process

There is no denying the fact that the new process flour contains relatively a larger per cent of gluten than the wheat from which it is made, so that it is really stronger than
